

## LETTER OF RECOMMENDATION

FOR KYRIACOS ANTONIADES

06/06/2012

To whom it may Concern:

Please accept my warmest recommendation for my colleague and friend Kyriaco. I have personally known him for the last eight years as Laboratory Associate in the Software Department classes I teach (IT Group in the General Department of Mathematics), for all Technological Applications students.

Throughout the years we cooperated in running various programming laboratory workshops in languages such as Basic, FORTRAN, C and Java. He practically created all relevant assignments single handed. In every case Kyriaco's support in the laboratories was immaculate, Every time with his particular direct and teaching ways he has gained a reputation of our most popular lecturer between our students and within the department.

A very active person, he is the first to tackle difficult tasks. Research orientated, he is hard working, a focused professional member of our faculty staff. He managed to prove himself in the conferences we participated and his research areas which include Decision Support Systems and Pervasive Computing. I have observed Kyriaco's progress year by year. Able and reliable he is a pleasure to work with. Always present in our social gatherings, offering generously his support.

When I was informed about his considering pursuing research in the University of Southampton, I was happy for him because I know of his interest for scientific research and methods. I am absolutely certain he would become an even better computer scientist and high caliber researcher in your department.

Even though I run the risk of losing a dear colleague I fully support his candidacy. In case further information is needed, please do not hesitate to contact me.

Yours faithfully,

Christos Koutsogeorgis

Professor

IT Group - General Mathematics Department
